Abstracts

The global Pet Doors market size is expected to reach \$ 1167 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2024, global pet door production reached approximately 28135 K units, with an average global market price of around US\$ 24per unit. A pet door or pet flap (also referred to in more specific terms, such as cat flap, cat door, dog door, or doggy door) is a small portal in a wall, window or human door to allow pets to enter and exit a house (or other structure) on their own without needing a person to open the door. Originally simple holes, the modern form is a hinged and often spring-loaded panel or flexible flap, and some are electronically controlled. They offer a degree of protection against wind, rain, and larger-bodied intruders entering the dwelling. Similar hatches can let dogs through fences at stiles.

Intelligent and automated upgrades

AI recognition technology: Pet doors integrate biometric recognition and intelligent sensing technology to achieve precise opening and closing, avoiding accidental entry or escape.

Remote control: Remote control through mobile apps or smart home systems, supporting sub permission management for multi pet households.

Health monitoring: Some high-end products will be embedded with sensors to monitor pet entry and exit frequency, weight changes, and other data, synchronized to the health management platform.

Improved safety and durability

Anti pinch design: using infrared sensing or pressure sensors to prevent pet injuries, especially for young and elderly pets.

Material Innovation: High strength composite materials (such as carbon fiber) and scratch resistant coating technology extend service life and adapt to outdoor environments.

Segmented markets and scenario expansion

Indoor and outdoor universal type: supports indoor partitions and outdoor courtyard doors, meeting the free movement needs of pets.

Apartment specific type: Silent design and miniaturized structure, suitable for high-density living environments in cities.

Pet adaptation: Develop pet doors with special sizes and materials (such as bite nets) for birds, crawling pets, etc.
