Abstracts

The global PET Film for MLCC market size is expected to reach \$ 5163.9 million by 2029, rising at a market growth of 6.5% CAGR during the forecast period (2023-2029).

The release film adds silicon composites and inorganic particles with anti-static effect on the one-side or both-sides of polyester film (PET) for excellent efficiency of uniform performance and adhesion. Once this is coated on the release films, it leads to uniform peeling strength, residual adhesion and extremely outstanding anti-static performance, protecting the adhesive layer of electric, electronic parts and display materials and it is a functional film that is used as base film in molding MLCC ceramics.

This report studies the global PET Film for MLCC production, demand, key manufacturers, and key regions.
