PET Fluorine Release Film is a specialized type of polyester film coated with a fluorine-based layer that provides a low surface energy, enabling it to act as a release liner in various industrial applications. The film is designed to prevent adhesion of substances, such as adhesives or coatings, making it ideal for use in applications where easy release is essential. Its features include high chemical resistance, excellent dimensional stability, and durability, along with its ability to withstand high temperatures. PET Fluorine Release Film is widely used in the manufacturing of self-adhesive products, labels, and tapes, as well as in the production of electronics and medical devices, where precise release control is crucial for high-quality results. Additionally, it is employed in processes like laminating and coating, where it helps to maintain clean, smooth surfaces.
