The global Pet Food Premix market size is expected to reach \$ 2568 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, global Pet Food Premix production reached approximately 388 K tons, with an average global market price of around 4,250 US\$/ton.

Pet food premix refers to concentrated compound additives blended with vitamins, minerals, amino acids, probiotics and nutritional enhancers in fixed proportions. It serves as core auxiliary raw materials for formulating complete pet diets, which can be evenly mixed with main grain, meat powder and fiber materials to supplement missing nutrients, improve food palatability and boost physical immunity of cats, dogs and other companion animals. Standardized in composition and stable in quality, it matches different growth stages and health conditions of pets.

Rising pet ownership and growing public awareness of scientific feeding steadily lift market demand for nutritious pet food premix. Higher requirements on pet health care and customized dietary nutrition further expand market scale. Business opportunities focus on developing functional premix targeting immunity improvement, intestinal care and hair protection, optimizing formula compatibility, launching age-specific products, and cooperating with pet food manufacturers to seize steady growth share in the pet nutrition raw material sector.
