Abstracts

The global Pet Gene Storage Service market size is expected to reach \$ 960 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Pet gene storage services refer to a service system that uses professional biotechnology to collect, extract, cryopreserve, or digitally store pet DNA samples to achieve long-term preservation of their genetic information. This service typically includes collecting oral swabs or blood samples, gene sequencing or gene fingerprinting, and long-term preservation in an ultra-low temperature liquid nitrogen environment or biobank. It can also be combined with gene testing reports, breed traceability, genetic disease risk analysis, and future cloning or breeding applications. Essentially, it is a cross-service model of 'Pet Biobank + Pet Genetic Data Assetization,' connecting pet healthcare, gene technology, and future reproductive/cloning technology applications.

With the continuous increase in global pet ownership per capita, the upgrading of pet healthcare consumption, and the decrease in biotechnology costs, pet gene storage services are gradually penetrating the consumer market from niche research and high-end breeding markets. Future growth will be driven by three main trends: First, the 'emotional assetization' of pets, with pets being seen as family members, driving increased demand for genetic information preservation and commemorative items; second, the development of precision medicine for pets, where genetic information will be used for disease prediction, medication guidance, and health management; and third, the maturation of cloning and assisted breeding technologies, giving genetic samples potential 'regenerative value.' In the long term, this industry may merge with pet insurance, pet genetic testing, and biobanks to form a 'pet life science data asset ecosystem,' but in the short term, it will remain primarily focused on high-end

consumption and scientific research applications, with a low market penetration rate but rapid growth.
