Warp knitted polyester geogrid (also known as PET knitted geogrid or high-strength polyester fiber warp knitted geogrid) is a new type of high-quality geotextile substrate for reinforcing roadbeds. It uses high-strength polyester fibers or polypropylene fibers as raw materials, adopts a warp knitted directional structure, and the warp knitted yarns in the fabric are non bent to each other. The intersection points are tied together with high-strength fiber filaments to form strong bonding points, fully exerting their mechanical properties.
