The global Pet Medical Cannabidiol market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pet Medical Cannabidiol, or Pet CBD, is a term that refers to products derived from the cannabis plant that are intended to be used for animals, such as dogs and cats. CBD is short for cannabidiol, which is one of the many active compounds found in cannabis. Unlike THC, which is another compound in cannabis that causes psychoactive effects, CBD does not make animals or humans high. CBD is believed to have various health benefits for pets, such as reducing anxiety, pain, inflammation, and seizures. However, the scientific evidence for these claims is still limited and more research is needed to confirm the safety and efficacy of CBD for pets.

This report studies the global Pet Medical Cannabidiol production, demand, key manufacturers, and key regions.
