Abstracts

Polyethylene Terephthalate is a clear, strong, lightweight plastic belonging to the polyester family. It is widely used as a food packaging material because it is hygienic, strong, lightweight, shatterproof, and retains freshness. The semirigid PET multilayers film has a combination of several layers. This significantly increases the shelf life by controlling oxygen, carbon dioxide, and moisture transmission rate.

Manufacturers and packaging designers prefer the semirigid PET multilayers film as they are safe, strong, transparent, and versatile. Their properties allow for superior innovation in terms of both package design and performance. It helps in protecting the integrity, freshness, and taste of the food items. Consumers highly recognize them due to their light weight, resealability, shatter resistance, and innovative style. They have good barrier properties that protect and preserve the contents of the package. They can be recycled easily, and the PET material can be used again for a wide range of applications.
