According to our (Global Info Research) latest study, the global PET Recycling market size was valued at US\$ 7408 million in 2025 and is forecast to a readjusted size of US\$ 10355 million by 2032 with a CAGR of 4.9% during review period.

PET Recycling (Polyethylene Terephthalate Recycling) refers to the process of collecting, sorting, cleaning, and reprocessing waste PET plastic materials?primarily used beverage bottles and packaging?into reusable raw materials. These recycled outputs can be in the form of flakes, pellets, or resin and are used in various applications such as textiles, packaging, strapping, and food-grade bottle-to-bottle production. PET recycling can be carried out through mechanical recycling, which physically processes the plastic without changing its chemical structure, or chemical recycling, which breaks PET down into its original monomers for repolymerization. PET recycling plays a key role in reducing plastic waste, lowering carbon emissions, and supporting circular economy systems worldwide.

In 2025, global PET Recycling production reached 9 million tons, average price was 800 USD/ton, with gross margin 40%.
