## Abstracts

The global PET Sheet Single-Screw Extrusion Production Line market size is expected to reach \$ 642 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of PET sheet single-screw extrusion production lines reached 4,160 units, with an average selling price of US\$105,000 per unit. A PET sheet single-screw extrusion production line is a complete equipment system specifically designed to process PET raw materials through continuous processes such as single-screw plasticizing, extrusion, three-roll calendaring, cooling, and traction to produce transparent, thermoformable PET sheets. The equipment features a simple structure, high cost-effectiveness, and stable operation, and is widely used in the packaging industry. Specifically, it includes cups, boxes, lids, trays, fruit and vegetable boxes, meat trays, blister packaging, and stationery packaging related to food and daily chemicals; it also extends to automotive parts, industrial sheets, consumer product casings, and some building and decorative panels. The upstream of the industry chain mainly includes PP, PE, PET, PLA resins and recycled bottle flakes/recycled sheet materials, as well as color masterbatches, impact modifiers, anti-fogging/antistatic additives, and other materials; the midstream consists of complete line integrators; and the downstream connects with sheet processing plants, thermoforming plants, food packaging plants, cup and box tray manufacturers, automotive interior parts plants, and industrial sheet processing plants. Gross profit margins are approximately 25%–35%.
