According to our (Global Info Research) latest study, the global PET Structural Core market size was valued at US$ 286 million in 2025 and is forecast to a readjusted size of US$ 499 million by 2032 with a CAGR of 8.4% during review period.

PET structural core is a lightweight, rigid core material made from polyethylene terephthalate (PET), commonly used in composite structures to enhance their strength and stiffness. It is particularly valued for its excellent mechanical properties, thermal stability, and chemical resistance. PET structural cores are often employed in sandwich panel constructions across various industries, including aerospace, marine, automotive, wind energy, and construction. They provide a high strength-to-weight ratio, making them ideal for applications requiring durability and load-bearing capabilities without significantly increasing weight. Additionally, PET structural cores are environmentally friendly, as they can be produced from recycled PET materials and are fully recyclable, aligning with sustainability goals in modern engineering and manufacturing.
