Abstracts

The global PET Substrate Release Film market size is expected to reach \$ 12446 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, the global production of PET substrate release film reached 13.5 billion square meters, with an average price of USD 0.62 per square meter, a production capacity of 16.0 billion square meters, and a gross margin of 31%.

PET substrate release film is a functional film material based on polyethylene terephthalate (PET) film, coated with silicone or non-silicone release layers to provide controlled release properties, high dimensional stability, excellent heat resistance, and high cleanliness. It is mainly used in high-end adhesive products, optical protective films, electronic materials, and die-cutting processes to protect adhesive interfaces and enable consistent release during processing and application.

Upstream of the PET substrate release film industry mainly includes suppliers of PET resin, functional additives, and silicone/non-silicone release coating materials. The midstream consists of PET film stretching manufacturers and release coating processors. Downstream applications cover labels and tapes, optical display materials, electronic component processing, lithium batteries, and medical and hygiene sectors. With the development of electronics, new energy, and advanced manufacturing industries, demand for products with high cleanliness, heat resistance, and stable release performance continues to increase, driving the industry toward higher-end and more functional products.

This report studies the global PET Substrate Release Film production, demand, key
