Abstracts

The global Pet Tumor Screening Services market size is expected to reach \$ 459 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

Pet tumor screening service is a comprehensive health screening service for pets such as dogs and cats, focusing on early detection and assessment of tumor risks. Through various methods such as hematology, imaging (such as ultrasound, X-ray, CT), and molecular biomarker detection, a systematic examination of various parts of the pet's body is conducted to achieve early tumor identification, risk assessment, and personalized health management plan development. This helps pet owners take timely intervention or treatment measures, improve the cure rate and quality of life.

As the pet population continues to grow and the status of pets within households rises, pet owners have demonstrated a significantly heightened focus on health management—particularly regarding the rapidly increasing demand for early screening of high-risk diseases such as tumors. Compared to traditional disease diagnosis and treatment, health check-up services offer distinct advantages in terms of prevention and scientific rigor. Consequently, within the landscape of pet healthcare consumption, these services exhibit a growth profile characterized by 'high frequency, low risk, and high value.' This trend is particularly evident in Tier 1 and Tier 2 cities, as well as in economically developed nations and regions, where the market penetration rate for such services is steadily on the rise.

From the supply side, pet oncology screening services are characterized by a focus on specialization and technological innovation. The continuous maturation of technologies—including blood tumor marker testing, diagnostic imaging, and AI-assisted

diagnosis—has rendered health check-up results more precise and quantifiable. Concurrently, the integration of veterinary hospitals, specialized screening centers, and online telemedicine platforms has driven innovation in service delivery models—such as appointment-based check-ups, membership-based health management programs, and remote consultations—thereby further expanding market capacity and stimulating consumer willingness to spend. Overall, the market demonstrates robust growth potential and promising prospects for long-term development.
