The global PET Type Antiblock Masterbatch market size is expected to reach \$ 139 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Anti-block masterbatch is made by several kinds of high effect special additives to mix together and through specific technical process. This kind of masterbatch can enhance the products anti-block property, and lubricant property.

When Anti-block masterbatch is used, one layer of lubricant film will occur and cover the plastic products surface. Meanwhile one microcosmic concavo-convex frame will be formed on the plastic product surface. By this way, it is distinctly to reduce the adhesion effect of plastic products.

PET Type antiblock masterbatch means the carrier is mainly PET resin and it is primarily used in the PET film and sheet industry.

China and North America are the main consumption region of PET type antiblock masterbatch, with market share of 21% and 20% respectively.
