## Abstracts

The global Petrolatum Gauze Dressing market size is expected to reach \$ 377 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global Petrolatum Gauze Dressing production reached approximately 180 M Units, with an average global market price of around 1,400 US\$/K Units.

Petrolatum Gauze Dressing is a sterile external dressing made by impregnating and solidifying medical gauze with refined petrolatum or medical white petrolatum, whose core function is to form a breathable and moisturizing protective film on the wound surface. It combines the absorbency of gauze with the closure, lubricity and mild irritation of petrolatum, which can effectively isolate external bacteria and pollutants, maintain a moist healing environment for wounds, reduce adhesion between the dressing and the wound surface, and alleviate pain and secondary damage during dressing changes. This dressing is widely used for the care and coverage of various acute wounds (such as abrasions, cuts, skin graft donor sites), chronic wounds (such as pressure ulcers, diabetic feet) and burn wounds, and is an indispensable basic medical consumable in clinical first aid, surgical operations and home care.

The steady expansion of the global wound care market, the high incidence of chronic wounds brought about by an aging population, and the steady growth in the number of burns, scalds and surgical operations have jointly driven the stable demand for petrolatum gauze dressings. Demand is mainly concentrated in hospital operating rooms, emergency departments and wound treatment centers, while the demand in community health service centers, home care and outdoor sports first aid scenarios is also constantly increasing. Business opportunities lie in developing upgraded products

with high purity and low allergenicity, optimizing the absorbency and breathability of the dressing to adapt to different wound types; expanding disposable, independently packaged portable products to meet the needs of pre-hospital first aid and outdoor use; at the same time, relying on supply chain advantages, sinking into emerging markets and providing overall solutions for out-of-hospital care scenarios, thereby expanding market share and cultivating long-term customers.
