## Abstracts

According to our (Global Info Research) latest study, the global Petroleum Sulfonate market size was valued at US\$ 2954 million in 2025 and is forecast to a readjusted size of US\$ 4049 million by 2032 with a CAGR of 4.6% during review period.

Petroleum Sulfonate is a class of anionic surfactants produced by sulfonating petroleum-derived hydrocarbons, primarily alkyl aromatic fractions, heavy alkylates, or petroleum distillates, followed by neutralization with sodium, calcium, barium, or ammonium bases. Petroleum sulfonates are valued for their excellent detergency, emulsification, wetting, dispersancy, corrosion inhibition, and lubricity properties, making them widely used in metalworking fluids, lubricating oil additives, enhanced oil recovery (EOR), industrial cleaners, textile processing, agrochemicals, and emulsion polymerization. The supply chain begins with upstream petroleum refining and petrochemical operations that produce suitable hydrocarbon feedstocks such as alkyl benzenes, paraffinic oils, and aromatic extracts. Midstream manufacturers carry out sulfonation using sulfur trioxide, oleum, or sulfuric acid, followed by neutralization, purification, blending, and formulation into sodium petroleum sulfonates, calcium petroleum sulfonates, or specialty grades. Downstream customers include lubricant additive producers, oilfield chemical suppliers, metalworking fluid formulators, detergent manufacturers, textile chemical companies, and industrial cleaning product manufacturers, with demand closely linked to the automotive, industrial manufacturing, energy, mining, and oil & gas sectors. In 2025, global Petroleum Sulfonate output was about 2.2 million tons with 2.6 million tons of capacity, average prices of USD 1,000-2,200 per ton, and gross margins around 22%.
