Abstracts

The global Pets CT Machine market size is expected to reach $ 2790 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

A Pet CT Scanner, more commonly referred to as a Veterinary CT Scanner, is a computed tomography imaging system designed or configured for diagnostic examination of dogs, cats, and other companion animals. The system acquires X-ray attenuation data from multiple angles around the animal and reconstructs cross-sectional, multiplanar, and three-dimensional images, enabling detailed evaluation of bones, the head and neck, thoracic and abdominal organs, lungs, blood vessels, tumors, and selected neurological disorders. Veterinary CT systems include dedicated animal CT scanners as well as multi-slice helical CT systems adapted for veterinary workflows, patient positioning, anesthesia monitoring, and animal-specific scanning protocols.

Key Findings

In 2025, global Pets CT Machine production reached approximately 16k units, with an average global market price of around US$160k per unit

Multi-slice CT and volumetric CT represent two important technical routes in veterinary computed tomography

Veterinary-specific workflow software and animal positioning are increasingly important product differentiators

+357 96 030922
info@marketpublishers.com

Neurology oncology orthopedics and thoracoabdominal imaging constitute major clinical demand areas

Market Trends

The Pets CT Machine market is evolving from repurposed human medical CT equipment toward veterinary-oriented systems optimized for animal size, workflow, installation conditions and clinical economics. Dedicated veterinary platforms increasingly emphasize compact footprints, simplified positioning, veterinary-specific software, lower infrastructure requirements and integration with anesthesia and patient monitoring. At the same time, image quality is improving through thinner slices, faster reconstruction, multi-planar visualization and advanced 3D post-processing. Antech's OmniTom Elite illustrates the mobile multi-slice direction with a 16-slice architecture, 0.625 mm slice capability, axial, helical and dynamic scanning, and support for CT angiography and perfusion. Animage's FIDEX follows another pathway by integrating veterinary CT with digital radiography and fluoroscopy in a compact platform specifically designed for companion-animal practices. Mobility is also becoming increasingly important: new products are being designed to move between examination areas or directly to the animal, reducing the requirement to transport anesthetized or critically ill patients through the hospital.

Market Dynamics

Drivers

The principal market drivers are increasing companion-animal medical expenditure, expansion of veterinary specialty services, greater demand for accurate diagnosis before surgery and wider use of advanced imaging in oncology, neurology, orthopedics and emergency medicine. CT provides rapid cross-sectional imaging and is particularly valuable for complex fractures, cranial disease, pulmonary lesions, tumors, vascular examinations and surgical planning. The growing sophistication of veterinary hospitals is also encouraging more institutions to establish in-house imaging capability rather than referring every advanced diagnostic case to external centers. Dedicated veterinary systems further lower adoption barriers by reducing space, shielding or infrastructure requirements compared with conventional large hospital CT configurations. Animage specifically positions FIDEX around a small footprint and veterinary-specific operation, while Antech promotes mobile, self-shielded systems suitable for veterinary practice infrastructure.

+357 96 030922
info@marketpublishers.com

Restraints

The major restraints are high capital expenditure, relatively low utilization in smaller clinics, installation and radiation-safety requirements, operator training and the need for anesthesia or sedation in many examinations. Unlike general radiography, CT requires greater expertise in scan protocol selection, image reconstruction and diagnostic interpretation, meaning adoption frequently depends on the presence of experienced clinicians or access to veterinary radiologists. Animal motion can significantly degrade image quality, so sedation or anesthesia is often required to maintain immobilization. Siemens Healthineers' veterinary-use instructions for SOMATOM systems explicitly address sedation or anesthesia and animal monitoring during CT scanning, illustrating the operational complexity associated with veterinary CT examinations. Equipment maintenance, tube replacement, software service and room modifications can further increase lifecycle cost, particularly for lower-volume veterinary facilities.

Opportunities

The largest opportunity lies in compact and mobile CT systems that make advanced imaging economically and operationally accessible to a broader range of veterinary hospitals. Self-shielded mobile systems can reduce dependence on dedicated CT rooms and allow imaging equipment to be brought closer to emergency, surgical or anesthetized patients. Antech currently offers portable and mobile veterinary CT products ranging from OmniTom Elite to the 32-slice BodyTom platform, illustrating the expansion of CT beyond conventional fixed installations. Another opportunity is the integration of several imaging modalities within one platform. Animage combines CT, digital radiography and fluoroscopy in FIDEX, while Epica's VIMAGO platform combines volumetric imaging, fluoroscopy and digital radiography. Such systems can improve equipment utilization for veterinary practices with limited floor space and create stronger economic justification for advanced imaging investment.

Challenges

A central industry challenge is balancing diagnostic image quality with equipment cost, compactness, radiation dose, scan speed and ease of animal positioning. Veterinary patients vary substantially in body size, from cats and small dogs to large breeds, while body shape differs considerably from human patients. Equipment therefore needs

+357 96 030922
info@marketpublishers.com

sufficient gantry clearance, appropriate fields of view and flexible scanning protocols without unnecessarily increasing system size and cost. Motion management remains another challenge because even minor movement can impair high-resolution images, particularly in thoracic or abdominal studies. Manufacturers also need to develop veterinary-specific software and workflow rather than relying entirely on human imaging interfaces. Service coverage is equally important because downtime of a high-value imaging system can disrupt specialist hospital operations, making installation support, remote diagnostics, spare-part availability and technician response increasingly significant competitive factors.

Industry Chain Analysis

The upstream industry includes X-ray tubes, high-voltage generators, detectors, gantry systems, slip rings or rotating structures, image acquisition electronics, computing platforms, reconstruction algorithms, patient tables, radiation shielding components and anesthesia-compatible positioning accessories. Midstream suppliers integrate these components into veterinary CT systems and develop scanning software, veterinary protocols, imaging workstations, DICOM connectivity and clinical visualization tools. Representative product providers include Antech, Animage and Epica, which cover mobile multi-slice CT, dedicated veterinary multimodality CT and compact volumetric imaging platforms. Downstream customers mainly include veterinary hospitals, specialty veterinary centers, referral hospitals, university veterinary institutions and larger veterinary clinics. The value chain increasingly extends beyond equipment sales to installation, clinical training, software upgrades, maintenance contracts, imaging support and remote radiology services.

Segment Insights

By installation type, Fixed Pets CT Machines remain particularly suitable for large veterinary hospitals, university veterinary centers and specialist referral institutions where examination volumes are relatively high and dedicated imaging facilities can be supported. Fixed installations generally provide stable scanning environments and can accommodate broader imaging requirements, including whole-body examinations and high-throughput workflows. Dedicated veterinary fixed systems can also reduce the footprint compared with conventional human CT equipment; Animage's FIDEX, for example, was developed specifically for companion-animal practices and combines CT with other imaging functions in a relatively compact installation.

+357 96 030922
info@marketpublishers.com

Mobile Pets CT Machines are differentiated by equipment mobility, compact size and reduced installation constraints. Antech's OmniTom Elite is a portable 16-slice system with battery operation, internal shielding, a 40 cm bore and standard electrical input, allowing the system to move within veterinary facilities rather than requiring every patient to be transported to a permanent scanning room. The company's BodyTom extends the mobile concept to a 32-slice configuration and larger-animal applications. Epica's compact VIMAGO GT30 PICO can also be moved from room to room using a standard power connection. The distinction between Fixed and Mobile therefore reflects not only physical installation but also workflow, infrastructure investment and target hospital size.

Downstream Market Opportunities

Veterinary specialty hospitals represent the most attractive downstream customer group because CT has become increasingly valuable across neurology, oncology, orthopedics, surgery, dentistry and internal medicine. Cranial and spinal examinations, complex fractures, pulmonary diseases, abdominal masses, vascular abnormalities and preoperative planning are particularly suitable for cross-sectional imaging. Emergency and critical-care applications provide additional opportunities for mobile CT because unstable or anesthetized animals can be scanned closer to the treatment area. Smaller veterinary hospitals represent another potential growth area as compact, veterinary-specific and multimodality systems reduce space and infrastructure barriers. Expansion of veterinary referral networks and remote image interpretation can further improve equipment utilization by allowing clinics without full-time radiologists to access specialist diagnostic support.

Regional Insights

North America is an important high-value market for Pets CT Machines because of its mature companion-animal healthcare system, large network of specialty hospitals and relatively broad adoption of advanced diagnostic imaging. It is also an important center of veterinary-specific CT product development, with Antech and Animage offering dedicated veterinary systems. Europe maintains strong demand from specialist veterinary hospitals and university veterinary centers, supported by established companion-animal medicine and advanced surgical services. Asia-Pacific represents an important expansion opportunity as premium veterinary hospitals and companion-animal medical services develop in China, Japan, South Korea and other major urban markets. Japan has a particularly established advanced veterinary imaging

+357 96 030922
info@marketpublishers.com

environment, while China's growing specialist hospital networks create opportunities for both dedicated veterinary CT and more cost-effective locally supplied equipment. In emerging markets, adoption is likely to remain concentrated initially in referral hospitals and major metropolitan veterinary centers because equipment investment and specialist interpretation remain significant requirements.

Competitive Landscape Analysis

The Pets CT Machine market includes dedicated veterinary imaging manufacturers, veterinary diagnostic equipment providers and suppliers adapting advanced CT technology to animal applications. Representative participants include Antech, Animage and Epica. Antech differentiates through a portfolio of mobile multi-slice CT systems including OmniTom and BodyTom; Animage focuses on the veterinary-specific FIDEX platform integrating CT with additional X-ray imaging modalities; Epica develops the VIMAGO volumetric imaging platform and compact mobile-oriented configurations. Competitive differentiation increasingly centers on image resolution, scan speed, animal-size adaptability, installation footprint, mobility, shielding requirements, multimodality capability, veterinary software and after-sales support. As advanced imaging becomes more widely adopted in veterinary medicine, suppliers capable of reducing total installation cost while maintaining diagnostic image quality and providing reliable clinical and technical support are positioned more favorably.

Report Scope

This report studies the global Pets CT Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Pets CT Machine and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Pets CT Machine that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Pets CT Machine total production and demand, 2021-2032, (K Units)

+357 96 030922
info@marketpublishers.com

Global Pets CT Machine total production value, 2021-2032, (USD Million)

Global Pets CT Machine production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)

Global Pets CT Machine consumption by region & country, CAGR, 2021-2032 & (K Units)

U.S. VS China: Pets CT Machine domestic production, consumption, key domestic manufacturers and share

Global Pets CT Machine production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (K Units)

Global Pets CT Machine production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

Global Pets CT Machine production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Pets CT Machine market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Siemens Healthineers, General Electric, Carestream Health, Antech Diagnostics, Animage Fidex, Epica Animal Health, Neurologica Corp, Hitachi Medical, Esaote, Molecubes, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Pets CT Machine market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$

I would like to order

Product name: Global Pets CT Machine Supply, Demand and Key Producers, 2026-2032

Product link: https://marketpublishers.com/r/G7C30C16C6D3EN.html

Price: US$ 4,480.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page https://marketpublishers.com/r/G7C30C16C6D3EN.html
