The global Pets Pheromones market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pets pheromones are chemical substances produced by animals, including dogs and cats, to communicate with members of their own species. These pheromones play a crucial role in the animal kingdom for various social and behavioral purposes. In the context of pets, pheromones are used to influence and modify the behavior of dogs and cats in ways that are beneficial to their well-being and to facilitate communication between pets and their owners.

Pet pheromone products, available in various forms, including sprays, diffusers, and collars, are designed to mimic or replicate these natural pheromones. By introducing synthetic pheromones into a pet's environment, pet owners and veterinarians aim to influence and modify their behavior positively, reduce anxiety, and promote a sense of well-being. These products are commonly used to address issues such as separation anxiety, fear of fireworks or thunderstorms, territorial marking, and other behavior-related problems.
