Abstracts

The global Pf Ago Endonuclease market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PfAgo endonuclease (Pf Ago Endonuclease) is derived from recombinant Escherichia coli, which contains the Argonaute (Ago) nuclease gene cloned from Pyrococcus furiosus. An endonuclease that specifically recognizes and cleaves the target nucleic acid. PfAgo endonuclease accurately cuts single-stranded DNA substrates under the guidance of 5' phosphorylated guide DNA (greater than 15 nt), and the cutting site is located at the 10th and 11th nuclei starting from the 5' end complementary to the guide sequence. The cleavage between nucleotides is not restricted by the target sequence and the sequence adjacent to the cleavage site.

This report studies the global Pf Ago Endonuclease production, demand, key manufacturers, and key regions.
