PFA (Perfluoroalkoxy) is a high-performance fluoropolymer known for its exceptional chemical resistance, high-temperature tolerance (capable of long-term use at 260°C), electrical insulation properties, and low friction coefficient. It is highly transparent, flexible, and exhibits excellent anti-aging performance, being nearly inert to almost all chemicals. PFA is widely used in semiconductor manufacturing, chemical equipment linings, pipes, valves, and high-purity fluid handling systems. Its outstanding corrosion resistance and high-purity characteristics make it an ideal material for demanding environments.
