## Abstracts

According to our (Global Info Research) latest study, the global PFAS-treated Carpets market size was valued at US\$ 1003 million in 2024 and is forecast to a readjusted size of USD 1241 million by 2031 with a CAGR of 3.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

PFAS-treated carpets are carpets that have been treated with Per- and Polyfluoroalkyl Substances (PFAS), a group of synthetic chemicals known for their ability to resist water, stains, and oils. PFAS treatments create a barrier on carpet fibers, making them highly resistant to staining, moisture, and soiling, which can increase the carpet's longevity and ease of maintenance. These treatments have been particularly popular in residential, commercial, and industrial carpet applications where high durability and stain resistance are desired. However, due to growing health and environmental concerns, PFAS chemicals are being phased out by many manufacturers. PFAS are sometimes called 'forever chemicals' because they do not break down in the environment and can accumulate in human and animal tissue over time. As a result, many carpet manufacturers are transitioning to PFAS-free, eco-friendly treatments that still provide effective stain resistance.

This report is a detailed and comprehensive analysis for global PFAS-treated Carpets market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
