## Abstracts

PHA microspheres are microspheres made from polyhydroxyalkanoic acid (PHA) material. PHA is a class of biodegradable polymers which are synthesized by bacteria in nature and have good biocompatibility and biodegradation properties. PHA microspheres are commonly used as carriers in drug delivery systems or as materials in other biomedical applications. These microspheres can be prepared by different methods such as emulsification, solvent evaporation, gelation, etc. to meet the requirements of specific applications.
