## Abstracts

The global Pharma Grade Light Liquid Paraffin market size is expected to reach \$ 365 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Pharma grade light liquid paraffin is a high-purity mineral oil that has been specially refined and is mainly used in the pharmaceutical and cosmetic industries. It is colorless, odorless, non-toxic, and chemically stable, making it an ideal pharmaceutical excipient and cosmetic matrix. In the pharmaceutical field, pharma grade light liquid paraffin is often used as a matrix for ointments, creams, and suppositories to lubricate, moisturize, and seal wounds; in cosmetics, it is used as a moisturizer and emollient to help the skin retain moisture and softness. In addition, pharma grade light liquid paraffin has good biocompatibility and safety and is harmless to the human body. The product has an average price of approximately US\$2,000 per ton and global sales of approximately 130,000 tons.

Pharmaceutical-grade light liquid paraffin is not only a key base oil in pharmaceutical preparations but also a vital bridge connecting drug safety and patient experience. In the global pharmaceutical industry's trend towards high quality and stricter regulation, its high purity, low irritation, and strong stability have made it an irreplaceable oil-based carrier in oral, topical, and injectable formulations. With an aging population, rising demands for chronic disease management, and increased focus on excipient traceability and the absence of allergenic risks, pharmaceutical-grade light liquid paraffin is transitioning from a supporting role to a key raw material in pharmaceutical companies' strategic planning. In the future, it must not only meet pharmacopoeia standards but also continue to evolve in a green, safe, and transparent direction, becoming a true 'invisible guardian' of the modern pharmaceutical industry.
