## Abstracts

According to our (Global Info Research) latest study, the global Pharmaceutical Composite Rigid PVC Film market size was valued at US\$ 1425 million in 2025 and is forecast to a readjusted size of US\$ 2013 million by 2032 with a CAGR of 5.1% during review period.

Pharmaceutical Composite Rigid PVC Film is a rigid or semi rigid pharmaceutical packaging forming material produced by combining pharmaceutical grade rigid PVC film with PVDC, PE, PCTFE, and other functional materials through coating, lamination, layering, or co extrusion processes. It is commonly used as the forming base material for pharmaceutical blister packaging or other thermoformed pharmaceutical packaging structures. During packaging, the material can be formed into stable cavities and sealed with aluminum foil or other lidding materials, providing moisture protection, oxygen barrier, contamination resistance, mechanical support, and product presentation for pharmaceutical products. The unit price of pharmaceutical composite rigid PVC film is typically a few US dollars per square meter, with a gross profit margin generally ranging from 20% to 40%.

The upstream supply chain of Pharmaceutical Composite Rigid PVC Films mainly includes suppliers of pharmaceutical grade PVC resin, PVDC emulsion, PE resin, PCTFE film, adhesives, coating materials, functional additives, solvents, aluminum lidding foils, packaging auxiliary materials, and cleanroom production consumables. It also involves processes such as calendering, extrusion, coating, lamination, layering, curing, slitting, inspection, and clean production. The midstream segment consists of pharmaceutical packaging material manufacturers, which are responsible for material formulation design, composite processing, quality control, regulatory filing, customer

validation, and volume supply, while providing packaging material solutions based on the barrier, formability, sealing, and stability requirements of different drugs. Downstream customers mainly include pharmaceutical companies, pharmaceutical packaging converters, contract manufacturing organizations, and pharmaceutical distribution packaging service providers, with end applications covering tablets, capsules, pills, suppositories, oral solid dosage forms, and other pharmaceutical products requiring blister packaging or thermoformed packaging protection.

Pharmaceutical Composite Rigid PVC Film is a widely used forming material in pharmaceutical blister packaging and thermoformed packaging, serving the moisture protection, barrier, formability, and mechanical protection needs of tablets, capsules, pills, suppositories, and other unit dose pharmaceutical products. With increasing requirements for pharmaceutical quality management, stronger attention to packaging stability and shelf life control by drug manufacturers, and the wider adoption of high speed blister packaging equipment, Pharmaceutical Composite Rigid PVC Films are evolving from conventional PVC substrates toward PVDC coated, PE laminated, PCTFE laminated, and multilayer high barrier structures. Future competition will focus on barrier performance, forming stability, sealing compatibility, material cleanliness, batch consistency, regulatory compliance, and the ability to provide customized packaging solutions for pharmaceutical manufacturers.
