## **Abstracts**

Pharmaceutical Excipients are crucial to drug delivery within the body. Generally, an excipient has no medicinal properties. Its standard purpose is to streamline the manufacture of the drug product and ultimately facilitate physiological absorption of the drug. Excipients might aid in lubricity, flowability, disintegration, taste and may confer some form of antimicrobial function. Selecting the appropriate excipient to support the design of your pharmaceutical formulation is an important step in the drug manufacturing process.
