Abstracts

Filtration is a method used to separate or collect a desired solid from a solution or to remove solid impurities from a liquid. Pharmaceutical filtration refers to the process of eliminating unwanted particles such as undissolved powders and solid impurities from the processed components, raw material, air, and water leading to a reduction in bacteria. The filters prevent the processed solution from contamination and help to maintain sterility.

Scope of the Report:

This report focuses on the Pharmaceutical Filtration in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Based on technique, the microfiltration segment dominated this market in 2017. The technique is applied to various applications ranging from the removal of unwanted suspensions to the removal of bacteria from the process material. This is the major factor responsible for the large share of this segment.

North America accounted for the largest share of the pharmaceutical filtration market in 2017.
