According to our (Global Info Research) latest study, the global Pharmaceutical Freeze-drying Services market size was valued at US$ 473 million in 2025 and is forecast to a readjusted size of US$ 787 million by 2032 with a CAGR of 7.6% during review period.

Pharmaceutical freeze-drying service is a specialized technology used in the pharmaceutical industry. It removes water from drugs through a freeze-drying process (also known as lyophilization), thereby improving the stability of the drugs, extending their shelf life, and facilitating transportation and storage.

Pharmaceutical freeze-drying services, a crucial supporting link in the pharmaceutical industry, extend the shelf life of sensitive pharmaceutical products such as vaccines and biologics by using low-temperature freezing and vacuum dehydration processes, while ensuring the activity and structural integrity of these products. In recent years, driven by the rise of biopharmaceuticals and the upgrading of global health demands, the market has shown steady and rapid growth.

Demand in the biopharmaceutical field is booming. Sensitive biological products such as vaccines, monoclonal antibodies, and peptide drugs are highly dependent on freeze-drying processes, and R&D investment in these drugs continues to increase. Outsourcing is a clear trend; pharmaceutical companies are choosing third-party freeze-drying services to reduce the cost of building their own production lines and shorten R&D cycles. For example, some companies have shortened the new product development cycle by 30% through cooperation. Policy support, including government support for biomanufacturing and specialized medical device industries in various countries, as well as the high requirements for stability in drug regulation, are further
