Abstracts

The global Pharmaceutical Grade Lanolin market size is expected to reach \$ 170 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Pharmaceutical-grade lanolin is a highly refined natural waxy substance extracted from wool, conforming to the standards of the European Pharmacopoeia (EP) or the United States Pharmacopoeia (USP). It is odorless or has only a very faint odor, making it an excellent base for pharmaceutical ointments. It possesses super absorbent properties, promotes drug absorption, and repairs the skin barrier.

The upstream sector relies heavily on livestock resources, using crude lanolin from raw wool washing wastewater as its core raw material. The core competitiveness of upstream companies has shifted to efficient recycling technology 'from wool washing wastewater to high-purity crude lanolin,' and source control of pesticide residues (especially organophosphates according to the European Pharmacopoeia standards). Global sales are projected at approximately 8,000 tons in 2025, with an average selling price of US\$14.9 per kilogram. The industry's gross profit margin is between 25% and 30%.

This report studies the global Pharmaceutical Grade Lanolin production, demand, key manufacturers, and key regions.
