According to our (Global Info Research) latest study, the global Pharmaceutical Grade Phycocyanin market size was valued at USD 27 million in 2023 and is forecast to a readjusted size of USD 38 million by 2030 with a CAGR of 5.1% during review period.

Phycocyanin is a pigment-protein complex from the light-harvesting phycobiliprotein family, along with allophycocyanin and phycoerythrin. It is an accessory pigment to chlorophyll. All phycobiliproteins are water-soluble, so they cannot exist within the membrane like carotenoids can. Instead, phycobiliproteins aggregate to form clusters that adhere to the membrane called phycobilisomes. Phycocyanin is a characteristic light blue color, absorbing orange and red light, particularly near 620 nm (depending on which specific type it is), and emits fluorescence at about 650 nm (also depending on which type it is). Allophycocyanin absorbs and emits at longer wavelengths than phycocyanin C or phycocyanin R. Phycocyanins are found in Cyanobacteria (also called blue-green algae)

The major players in global Pharmaceutical Grade Phycocyanin market include DIC Corporation, Japan Algae, Parry Nutraceuticals, etc. North America and Europe are main markets, they occupy about 70% of the global market.
