The global Pharmaceutical-grade Pollen Allergens market size is expected to reach \$ 1735 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Pharmaceutical-grade pollen allergens refer to highly purified and standardized pollen extracts or recombinant protein preparations produced under stringent quality control protocols. These substances are specifically formulated for clinical application, serving as the critical reagents for accurate in vivo or in vitro diagnostic procedures such as skin prick tests and serum-specific IgE assays to identify patient sensitization.

Furthermore, they function as the primary active pharmaceutical ingredients in allergen immunotherapy (AIT), where controlled administration is utilized to induce immune tolerance, thereby aiming to alleviate or cure allergic diseases.
