According to our (Global Info Research) latest study, the global Pharmaceutical Grade Polyglutamic Acid market size was valued at USD 82 million in 2022 and is forecast to a readjusted size of USD 107.1 million by 2029 with a CAGR of 3.8% during review period.

The development trend of pharmaceutical grade polyglutamic acid is expected to be positive in the coming years. Polyglutamic acid (PGA) is a biodegradable polymer that has various applications in the pharmaceutical industry. It is known for its excellent biocompatibility, water solubility, and ability to form stable complexes with drugs. One of the key trends driving the development of pharmaceutical grade PGA is the increasing demand for biodegradable and biocompatible materials in drug delivery systems. PGA can be used as a carrier for various drugs, including anticancer drugs, antibiotics, and anti-inflammatory drugs. Its ability to form stable complexes with drugs allows for controlled release and targeted delivery, which can enhance the efficacy and reduce the side effects of drugs. Another trend is the growing interest in personalized medicine and targeted therapies. PGA can be modified to have specific properties, such as pH responsiveness or targeting ligands, which can enable targeted drug delivery to specific tissues or cells. This can improve the therapeutic index of drugs and minimize off-target effects.
