Abstracts

According to our (Global Info Research) latest study, the global Pharmaceutical Grade Sodium Salicylate market size was valued at US\$ 31.28 million in 2025 and is forecast to a readjusted size of US\$ 40.94 million by 2032 with a CAGR of 3.9% during review period.

Pharmaceutical grade sodium salicylate is a white crystalline powder or flakes. It is a high-purity organic carboxylic acid salt, primarily used in the pharmaceutical field as a nonsteroidal anti-inflammatory drug (NSAID) with analgesic, antipyretic, and antirheumatic effects. It is commonly used to treat arthritis, especially as an alternative to aspirin in cases of allergy. Global sales in 2025 were approximately 8,000 tons, with an average selling price of \$3,800 per ton. The industry's gross profit margin is between 20% and 30%.

The upstream core raw materials are high-purity phenol and carbon dioxide, which are used to synthesize industrial salicylic acid through the Kolbe-Schmitt reaction. This industrial-grade salicylic acid is then purified through multiple decolorization and recrystallization processes to obtain pharmaceutical-grade salicylic acid, which is subsequently neutralized with high-purity sodium hydroxide or sodium carbonate. The midstream involves the manufacturing of pharmaceutical intermediates and active pharmaceutical ingredients (APIs). The downstream connects with pharmaceutical companies, processing it into tablets, injections, or as a suppository base, ultimately distributing it to medical institutions and retail pharmacies.
