According to our (Global Info Research) latest study, the global Pharmaceutical Industry Isolators market size was valued at USD 424.3 million in 2023 and is forecast to a readjusted size of USD 497.4 million by 2030 with a CAGR of 2.3% during review period.

Isolators are a core component to the pharmaceutical industry, critical for a range of processes. These gas-tight enclosures provide a complete barrier to ensure aseptic conditions and containment. Many R&D or production processes handle highly active pharmaceutical compounds, very toxic chemicals, or Nano sized material, which have the possibility of causing harmful effects on the human body and surrounding environment. To reduce exposure risk by scattering hazardous or toxic materials, a handling facility or system are required to be placed in an isolated area and operators are required to put on Personal Protective Equipment (PPE), dust masks, gloves and suits. In such cases the work environment becomes poor, and operators are still exposed to the hazardous surroundings. Introduction of isolators or glove boxes into such processes enables perfect containment of hazardous and toxic materials and keeps the scattering risk to operators and the environment at a minimum level, thus resulting in prevention of contamination of the product and improvement of the working environment and reduction of overall cost of the facility and its management.

The major manufacturers of Pharmaceutical Industry Isolators in the world include SKAN and Getinge. The first two manufacturers account for more than 50% of the market. Europe is the world's largest market, accounting for approximately 38% of the market, followed by North America and Asia Pacific, accounting for 33% and 27%, respectively. Among them, aseptic production isolators and aseptic testing isolators

accounted for 95% and 5% respectively. The most applications are in the pharmaceutical and biotechnology industries and academic research, accounting for 91% and 8% respectively.
