The global Pharmaceutical Impurity Testing Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pharmaceutical Impurity Testing Service refers to the analytical testing of pharmaceutical compounds to identify and quantify impurities or degradation products that may be present in drug substances or drug products. These impurities can arise from different sources such as drug manufacturing processes, storage conditions, or interactions with other chemical moieties. It is crucial to detect and monitor these impurities to ensure the safety, efficacy, and quality of pharmaceutical products, as some of them can cause adverse effects on human health. The testing process usually involves sophisticated analytical techniques such as chromatography, mass spectrometry, or spectroscopy, and must comply with regulatory requirements set by health authorities such as the FDA or EMA.
