According to our (Global Info Research) latest study, the global Pharmaceutical Pregelatinized Starch market size was valued at US\$ 1904 million in 2024 and is forecast to a readjusted size of USD 2548 million by 2031 with a CAGR of 4.3% during review period.

Pregelatinized starch is modified starch, which is obtained by partially or completely breaking starch granules by chemical or mechanical methods. It is often used as a binder, diluent and disintegrant in tablets. Pregelatinized starch has self-lubricating effect. When used in combination with other excipients, magnesium stearate should be added as a lubricant. This product is non-toxic and non-irritating, but it is harmful if taken in large quantities.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management,

further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
