Abstracts

According to our (Global Info Research) latest study, the global Pharmaceutical Sterile Fill-Finish market size was valued at USD 3404.7 million in 2023 and is forecast to a readjusted size of USD 4740.7 million by 2030 with a CAGR of 4.8% during review period.

In pharmaceutical manufacturing, fill-finish operations are critical, since fill-finish is the last step before a product is packaged and ultimately delivered to the patient. By the time a drug reaches this stage, the drug product is highly valuable, as it has already been through labour- and cost-intensive production stages, including upstream processing, cell culture or fermentation and downstream purification. Failures in the integrity of the fill-finish stage can introduce microbial contamination and generate issues with formulation and dosing.
