Pharmaceutical Testing Service is often used to identify the chemical composition and molecular structure of each individual substance contained in a medication.

This knowledge provides insight into a drug's performance and safety considerations. Pharmaceutical testing can reveal a pharmaceutical's solubility and can predict the medication's ability to reach a specific target within the body. Testing may even reveal contamination in the manufacturing production process or highlight other, previously unknown risks with the formulation.

Pharmaceutical Testing Services include raw materials testing, in-process and product release testing, finished pharmaceutical products testing and environmental samples, etc. It is mainly used in analytical testing, method development, stability testing and so on, the end users are like pharmaceutical factory, medical institution, government of health department, etc.

There are many testing items for pharmaceutical testing, including drug quality testing, drug ingredient testing, drug heavy metal testing, drug adverse reaction testing, drug sealing testing, biological drug testing, drug appearance testing, drug routine testing, drug physical and chemical testing, drug safety testing and drug defect testing.

The purpose of pharmaceutical testing is to prevent substandard drugs from entering the market and ensure the safety of drugs.
