## Abstracts

According to our (Global Info Research) latest study, the global Pharmacy Medication Management Software market size was valued at US\$ 572 million in 2025 and is forecast to a readjusted size of US\$ 803 million by 2032 with a CAGR of 5.0% during review period.

Pharmacy drug management software is a specialized information management system designed specifically for drug distribution and pharmaceutical services. Its core function is to precisely control the entire lifecycle of drugs within a pharmacy through digital means, covering procurement, warehousing, storage, prescription processing, dispensing, medication dispensing, sales, and after-sales tracking. It is not only a core operational platform for pharmacies but also a crucial hub connecting medical institutions, medical insurance payments, patient services, and the upstream and downstream of the supply chain, serving various institutional formats such as retail pharmacies, hospital pharmacies, community pharmacies, and pharmaceutical wholesale companies.

The future of pharmacy drug management software lies in its deep integration into the new 'patient-centered' smart medicine ecosystem. Its development will transcend traditional inventory management tools, evolving towards integration, intelligence, and platformization. In the future, the software will leverage cloud computing and artificial intelligence to become a data-driven decision-making center integrating intelligent procurement forecasting, automated prescription review, personalized medication guidance, and full-cycle management of chronic diseases. With the normalization of new models such as prescription outflow, online ordering and in-store pickup, and instant delivery (O2O), software must serve as a key node, seamlessly connecting with

internet hospitals, electronic medical insurance vouchers, drug traceability platforms, and third-party logistics to build a closed-loop omnichannel service. Driven by both policy and market forces, it will become the infrastructure and core engine for pharmacies to achieve refined operations, provide high-value-added professional pharmaceutical services, and ultimately transform into the core of community health services.
