According to our (Global Info Research) latest study, the global Phase Change Grease market size was valued at US\$ 133 million in 2024 and is forecast to a readjusted size of USD 171 million by 2031 with a CAGR of 3.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Phase change thermal conductive material has high thermal conductivity and stable thermal conductivity. Before use, it is a paste, but when all the diluents are completely volatilized, it becomes a solid at room temperature. Under working conditions, as the temperature rises, especially when the temperature reaches above its phase change temperature, it becomes a semi-solid substance that can flow, can wet the two interfaces well, greatly remove the air between the interfaces, reduce the interface contact thermal resistance, and show excellent heat dissipation performance.
