## **Abstracts**

According to our (Global Info Research) latest study, the global Phased Array Radar Chip market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Phased array radar chip is an integrated circuit with the function of converting signals into electromagnetic waves, and then using electromagnetic waves to control the direction of signal transmission. Phased array chips can operate in different frequency ranges and therefore have a wide range of applications in wireless communications and radar systems.

The principle of phased array radar chips is based on phase delay control. In phased array chips, the signal is divided into thousands of different beams, and each beam can independently control the direction. When transmitting signals, by controlling the phase delay of each beam, the transmission direction of the signal can be changed.
