Abstracts

The global Phenalkamine Epoxy Hardener market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Phenalkamine Epoxy Hardener is an epoxy resin curing agent typically composed of phenalkamines, aliphatic amines, and polyether amines. It has excellent properties such as water resistance, chemical resistance, heat resistance, and abrasion resistance, and is commonly used to prepare high-performance epoxy floor coatings, marine coatings, anti-corrosion coatings, and electrical insulation materials.

The curing mechanism of phenalkamine epoxy hardener is based on the reaction between the phenol and amine groups in the phenalkamine molecules and the epoxy groups in the epoxy resin, forming amide and amine bonds. Due to the presence of multiple active groups in the phenalkamine molecule, a highly crosslinked curing network can be formed. Compared with other epoxy curing agents, phenalkamine epoxy hardener has excellent water resistance and chemical resistance, making it suitable for use in harsh environments.

This report studies the global Phenalkamine Epoxy Hardener production, demand, key manufacturers, and key regions.
