A Phenyl HPLC Column is a type of chromatographic column used in High-Performance Liquid Chromatography (HPLC) for the separation and analysis of complex mixtures of compounds. It is specifically designed for use in reversed-phase chromatography (RPLC), where the stationary phase (the material inside the column) is non-polar, and the mobile phase is polar. The 'phenyl' in the name refers to the specific functional group that is covalently bonded to the silica surface of the column. The phenyl group is a type of aromatic hydrocarbon (C₆H₅) that plays a critical role in interactions with the compounds being separated.
