Phenyl silicone oil is a kind of organic silicon polymer, which is a special type of silicone oil. It is a polysiloxane formed by replacing some methyl groups with phenyl groups with silicon-oxygen bonds (Si-O) as the skeleton. The introduction of phenyl groups gives silicone oil some unique properties, making it have the characteristics of high and low temperature resistance, chemical stability, low surface tension, lubricity and other characteristics of ordinary silicone oil, and also has some special properties, such as good radiation resistance, high refractive index, low volatility, and better oxidation resistance and thermal stability at high temperatures. These characteristics make phenyl silicone oil widely used in many special fields.
