Abstracts

The global Phenylbenzimidazole Sulfonic Acid market size is expected to reach \$ 120 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Phenylbenzimidazole sulfonic acid is a water-soluble chemical sunscreen agent primarily utilized in cosmetics and skincare products; it efficiently absorbs UVB (medium-wave ultraviolet radiation) and offers partial absorption of UVA. Stable under sunlight, it is frequently incorporated into transparent sunscreens, day creams, cleansing products, and water-based formulations to prevent skin erythema, sunburn, and photoaging.

The core upstream raw materials for phenylbenzimidazole sulfonic acid are *o*-phenylenediamine and benzaldehyde (or benzoic acid/benzoyl chloride). The compound is synthesized by first constructing the benzimidazole ring via a condensation reaction, followed by a sulfonation reaction using concentrated sulfuric acid or chlorosulfonic acid. The supply and pricing of these raw materials are significantly influenced by the market dynamics of bulk petrochemical products as well as environmental and safety regulations. Midstream production focuses on the purification of high-purity crystals to ensure the product exhibits excellent solubility and light transmittance within aqueous phases. Downstream applications are precisely targeted toward water-based sunscreen systems.

In 2025, global sales volume is projected to reach approximately 4,200 tons, with an average selling price of \$20 per kilogram. The industry's gross profit margin typically ranges between 30% and 40%.

Phenylbenzimidazole Sulfonic Acid is a highly effective, water-soluble UVB absorber. Its

core strengths lie in its high sun protection efficiency, excellent sensorial profile (lightweight, hydrating, and non-greasy), robust photostability, and ease of dispersion within water-based formulations. Amidst the surging global demand for 'water-like' sunscreens and 'refreshing, oil-controlling' skincare?particularly in regions characterized by high summer heat and humidity?Phenylbenzimidazole Sulfonic Acid enables the formulation of non-greasy, non-pore-clogging sunscreen sprays and gels. This capability perfectly addresses the specific needs of consumers with oily skin and aligns seamlessly with the key growth drivers of the modern skincare market.
