The global Phenylethyl Alcohol market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Phenylethyl alcohol, also known as phenethyl alcohol or 2-phenylethanol, is an aromatic compound with the chemical formula $C_8H_{10}O$. It is classified as a primary alcohol because it has a hydroxyl group (-OH) attached to a primary carbon atom.

This compound has a pleasant rose-like scent, which makes it commonly used in the fragrance and flavor industries. It is found in various natural sources, such as rose oil, carnation, and other essential oils. Due to its pleasant aroma, phenylethyl alcohol is used in perfumes, cosmetics, and personal care products.

In addition to its use in the fragrance industry, phenylethyl alcohol also serves as a preservative in various products, including pharmaceuticals, lotions, and cosmetic formulations. Its antimicrobial properties help inhibit the growth of bacteria and fungi, extending the shelf life of these products.

Phenylethyl alcohol is generally considered safe for cosmetic and personal care applications when used in appropriate concentrations, but as with any chemical compound, excessive use or exposure may cause irritation or allergic reactions in some individuals.

This report studies the global Phenylethyl Alcohol production, demand, key manufacturers, and key regions.
