According to our (Global Info Research) latest study, the global Pheromones market size was valued at USD 586.5 million in 2023 and is forecast to a readjusted size of USD 1225.5 million by 2030 with a CAGR of 11.1% during review period.

Pheromones are chemicals produced as messengers that affect the behavior of other individuals of insects or other animals. They are usually wind borne but may be placed on soil, vegetation or various items. Each species of insect relies on some one hundred chemicals in its life, to engage in such routine activities as finding food and mates, aggregating to take advantage of food resources, protecting sites of oviposition, and escaping predation. It has been found that pheromones may convey different signals when presented in combinations or concentrations. Pheromones differ from sight or sound signals in a number of ways. They travel slowly, do not fade quickly, and are effective over a long range. Sound and sight receptors are not needed for pheromone detection, and pheromone direction is not to straight lines.

Global Pheromones key players include Shin-Etsu, Suterra, Bedoukian Research, Isagro, SEDQ, etc. Global top five manufacturers hold a share about 75%. Europe and Asia Pacific is the largest market, both with a share about 30%, followed by North America, with a share about 25 percent.
