## Abstracts

According to our (Global Info Research) latest study, the global Phlogopite Tape market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Phlogopite tape is a composite material tape consisting of metal foil and mica sheets. It is usually made of alternate layers of metal foil and mica sheets, which are bonded together by glue to form a structure in which metal foils and mica sheets are alternately arranged. Phlogopite mica tape has the following characteristics: High temperature resistance: The metal foil part of phlogopite mica tape has good high temperature resistance and can withstand the use in high temperature environment. Corrosion resistance: The metal foil part of the phlogopite mica tape has certain chemical corrosion resistance and can be used in some special environments. Fire and heat insulation: Phlogopite mica tape can effectively prevent the spread of flame and smoke, provide fire and heat insulation protection, and reduce the risk of fire. Conductivity: The foil portion of the phlogopite tape is conductive and can be used in applications such as electromagnetic shielding and conductive connections. Phlogopite tape is often used in heat insulation, fire prevention, electromagnetic shielding and other fields under high temperature environment. Due to the alternate arrangement of metal foil and mica sheets in the structure of phlogopite mica tape, it has the advantages of the conductivity of metal foil and the insulation performance of mica sheets, so it is suitable for some applications that require both conductive and insulating functions. sex.
