According to our (Global Info Research) latest study, the global Phosgene Detector market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The phosgene detector is a device used to detect the content of phosgene in the environment. Phosgene, also known as carbonyl chloride, is a highly toxic gas with high chemical reactivity and strong corrosiveness when it meets water. It will harm the human respiratory tract, irritate the skin, and may cause bronchitis and pulmonary edema if inhaled. Therefore, it is necessary to monitor and control its concentration in time and accurately.

The phosgene detectors are widely used and can help monitor the concentration of phosgene, discover potential safety risks in time, and take appropriate control measures.
