## Abstracts

The global Phosgene Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The phosgene detectors are widely used and can help monitor the concentration of phosgene, discover potential safety risks in time, and take appropriate control measures.

The phosgene detector is a device used to detect the content of phosgene in the environment. Phosgene, also known as carbonyl chloride, is a highly toxic gas with high chemical reactivity and strong corrosiveness when it meets water. It will harm the human respiratory tract, irritate the skin, and may cause bronchitis and pulmonary edema if inhaled. Therefore, it is necessary to monitor and control its concentration in time and accurately.

This report studies the global Phosgene Detector production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Phosgene Detector, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
