## Abstracts

According to our (Global Info Research) latest study, the global Phosphate Buffered Solution market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Phosphate Buffered Solution (PBS) is a widely used buffer solution in biological and biochemical sciences. It is composed of sodium chloride (NaCl), sodium phosphate dibasic ( $\text{Na}_2\text{HPO}_4$ ), and sodium phosphate monobasic ( $\text{NaH}_2\text{PO}_4$ ) dissolved in water. PBS helps to maintain a stable pH level, provides physiological osmolarity, and prevents denaturation of biological samples. It is commonly used in cell culture, enzyme reactions, immunohistochemistry, and protein characterization. Its buffering capacity allows for the stabilization of pH even when small amounts of acid or base are added. PBS is an essential tool for maintaining proper cellular conditions in various experimental procedures.

The industry trend of Phosphate Buffered Solution is witnessing steady growth. With the rising demand for biopharmaceuticals, cell-based research, and diagnostic applications, the use of PBS as a versatile buffer has increased significantly. Advancements in biotechnology and life sciences have further boosted the demand for PBS as it remains a reliable buffer solution for various biological reactions and experiments. Additionally, the increasing focus on research and development activities in the pharmaceutical and biotechnology sectors is driving the demand for PBS. The market for PBS is expected to continue its growth trajectory due to its essential role in maintaining optimal cellular conditions and its versatility in biotechnological applications.
